## 13. TECHNICAL PROFICIENCY/BIOGRAPHICAL DETAIL

Dr. Himender Bharti has been delving on ‘Systematics and Evolution of Ants’ for the last twenty years. His efforts have culminated in building up database and reference collection of Indian, Sri Lankan, Nepalese and Bhutanese ants. He has the distinction of visiting Natural History Museum, London and many other Natural History collections in Asia. His passion for the natural history has led to the discovery of about 100 new species of ants (including two potential redlist species), out of which ninety per cent are endemic to the region. He is using ants as indicators of ecosystem health to assess the impact of anthropogenic activities. Dr. Bharti in collaboration with other myrmecologists of the world is mapping the Zoogeographical patterns of Asian ants. Besides, he is also actively involved in red listing and conservation of ants in South-east Asia. Currently, he is deciphering the intricacies of evolution/speciation patterns in Himalayan ants with the help of molecular tools and is also involved in Global project on ant genomics, Formicidae Barcode of Life Project, which aim to provide a comprehensive dataset of the genomic diversity of ants.
